

AEROSMART

UAV TRADING & FIELD OPERATIONS

— AERIAL & CAMERA INTELLIGENCE

Autonomous Drones. Any Camera. Total Intelligence.

We don't just fly drones — we turn **any video feed** into decisions, alerts and reports. On a drone, or on the cameras you already own.

30+ AI capabilities

Drone & fixed-camera

GPS-denied flight

Fully unmanned 24/7

The intelligence isn't the drone. It's **what the AI sees.**

The same engine runs on an autonomous drone **and** on existing fixed / CCTV cameras. A client can start with the cameras already on site — no drone required — then scale up to autonomous flight.

DRONE + AI

**Wildlife & hazard
detection**

Live AI on a drone
feed

DRONE + AI

**Coastal zone
monitoring**

Live AI on a drone
feed

Your fixed & CCTV cameras

The same AI runs on the cameras you already
have — no drone needed.

30+ AI capabilities. One system.

 Crack & defect detection	 Thermal hot-spot mapping	 Fire & smoke detection	 Leak / surface anomaly
 Corrosion detection	 Change detection	 Work-progress monitoring	 Orthomosaic & 3D mapping
 Volume / stockpile	 Solar cell-failure	 Vegetation health	 Vegetation encroachment
 Erosion / terrain change	 Water-quality anomaly	 Restricted-zone intrusion	 Perimeter patrol
 Illegal-structure detection	 People counting	 Crowd-density & alerts	 Vehicle detection & count
 Parking / occupancy	 Asset inventory & count	 Missing / damaged asset	 Animal / bird activity

...and growing. **Custom models trained to a client's exact target on request.**

— ALREADY SHIPPED · REAL FOOTAGE

Trained. Deployed. Validated.

30+

AI capabilities

Any

camera — drone or fixed

What we deliver. What you gain.

What we deliver

CONCRETE SCOPE

- AI vision software — on your existing cameras, or ours
- Autonomous drone + charging dock (optional)
- Live command dashboard + automated, geo-tagged reports
- Setup, model tuning, training & support — managed or self-run

What you gain

REAL VALUE

- ✓ Catch faults early — before failure, fire or downtime
- ✓ No crews in danger zones — the drone inspects, not people
- ✓ Lower cost & faster cycles — automated & repeatable, 24/7
- ✓ Start with cameras you already own — scale to drones later

We scope every engagement to **exactly what we can deliver** — no overpromising.

Four sectors, **day one.**

Energy & Solar

SOLAR · SUBSTATIONS

- Hot-spot & cell failure
- Cracked / soiled panels
- Output anomaly mapping

Transmission

LINES · TOWERS

- Corrosion & defects
- Conductor hot-spots
- Vegetation under lines

Mining & Build

PITS · SITES

- Stockpile volume
- Progress vs. baseline
- Slope movement

Oil & Gas

PIPELINES · TANKS

- Fire / smoke / leak
- Tank-roof defects
- Right-of-way intrusion

Flies where GPS doesn't exist.

Indoors, in tunnels, between tank rows,
under a refinery deck — on-board
visual SLAM keeps the drone stable
with .

- On-board visual-inertial SLAM
- Depth-camera obstacle avoidance
- Reaches jobs other drones can't

Many drones. **One AI brain.**

Split a large site into sectors, assign a drone to each, and command the fleet in plain language. The AI co-pilot arms, tasks and reports back.

- Sector tasking & formation flight
- Natural-language commands
- One operator, whole fleet

Every flight becomes a report.

Live telemetry, switchable map layers and AI events in one picture — rolled up into counts, heatmaps, trends and exportable geo-tagged reports. Runs **offline / on-premises**.

- Orthomosaic · LIDAR · thermal layers
- KPI dashboards & audit reports
- No cloud dependency required

Run it **without a crew.**

A human sets the objective once. The system repeats it on schedule — and only calls a person when something matters.

Launch

Auto take-off from dock, on schedule

Inspect

Fly route, AI sees & flags

Report

Alerts & evidence to dashboard

Recharge

Precision-land, charge, repeat

Delivered work. Real deployments.

İzmir Metropolitan · Bay Monitoring

Coastal **pollution & vessel monitoring** over the bay — live AI on fixed shore cameras.

Arvato · Indoor & Outdoor Patrol

Autonomous **indoor & outdoor patrol** across logistics facilities — unmanned, 24/7.

Digital Twin · Mall Complex

3D **digital-twin & AI monitoring** platform for a large shopping-mall complex.

GPS-Denied Autonomous Flight

Stable indoor flight on **real PX4 firmware** — validated, repeatable, zero GPS.

Two companies. One offering.

BBA Technology

TECHNOLOGY & AI · İZMİR

- ✓ Autonomy, flight-control & SLAM
- ✓ AI vision models & custom training
- ✓ Dashboards, analytics & product IP

AEROSMART

- ✓ Client relationship & regional reach
- ✓ Field operations & flight services
- ✓ Hardware supply & local support

— READY TO DEPLOY

Bring an asset. We'll make it **intelligent**.

Tell us the asset and the country — we'll shape a targeted demo,
and the deployment plan behind it, within days.
